

India's Agricultural Crop Production Analysis

Introduction

This project analyzes agricultural crop production across Indian states using a crop production dataset. The objective is to identify trends, compare states, crops and seasons, and present insights through data analytics.

Objectives

- Analyze crop production by state
- Compare crops and seasons
- Identify production trends
- Support data-driven agricultural decisions

Tools

Excel, SQL, Tableau, GitHub

Dataset

The project uses a crop production dataset containing State, District, Crop Year, Season, Crop, Area and Production.

Methodology

Data collection, data cleaning, SQL analysis, visualization design, dashboard planning and documentation.

Expected Outcomes

Interactive dashboards, summary statistics and insights into agricultural production.

Conclusion

The project demonstrates the use of data analytics techniques to explore Indian agricultural crop production.
